Name: Fernando Contreras Corzo

Date: April 7, 2026

Assignment: Module 3.2 - Normalized Tables

	A	B	C	D	E	F
1	**Publisher table**					
2	**publisher_ID (PK)**	**publisher_name**	**publisher_address**	**publisher_email**		
3	**PUB001**	Penguin Books	123 Main St, NY	info@penguin.com		
4						
5	**Author table**					
6	**author_ID (PK)**	**author_first_name**	**author_last_name**	**author_phone**	**author_email**	**author_address**
7	**AUTH001**	Fernando	Contreras	555-1234	ffernando@email.com	456 Oak Ave, CA
8						
9	**Book table**					
10	**book_isbn (PK)**	**book_name**	**book_price**	**publisher_ID (FK)**		
11	**978-0-06-112008-4**	One Hundred Years	$14.99	*PUB001*		
12						
13	**Book_Author table** (links books to authors — handles many-to-many)					
14	**book_isbn (FK)**	**author_ID (FK)**				
15	*978-0-06-112008-4*	*AUTH001*				
16						

Assumptions:

- Each book has one publisher, but a publisher can have many books
- A book can have more than one author, so a junction table (Book_Author) was created to handle that relationship
- author_ID was added as a generated primary key since no unique author identifier was in the original fields
- book_isbn serves as the natural primary key for books
